PowerMand Upgrades DreamWatts® Energy Management System, Expands Dealer Network

Portland, Oregon (September 17, 2009) — PowerMand, a developer of innovative energy management services that optimize building performance in light commercial and residential sites, is pleased to introduce a new version of its breakthrough DreamWatts® product line. The new software makes it easier for contractors to install and maintain DreamWatts in buildings up to 100,000 square feet.

“Light commercial building owners face huge challenges in controlling the costs associated with energy use, and contractors who service this building segment have not had the tools available to provide acceptable returns on investment to the building owners.” said Dan Russell, CEO of PowerMand. “Using DreamWatts, building owners can reach an 8-18 month payback depending on their electricity rates, enabling contractors to reach new customers and provide existing customers with an increased level of service at less cost.”

“For my service customers, DreamWatts’ new monitoring and alerting capability allows me to know what’s going on with their equipment without needing to be on-site” says Brandon Sorenson, President of Treasure Valley Refrigeration in Boise, Idaho. “Better customer support will increase customer satisfaction and retention for TVR.”

Other improvements to the DreamWatts product include the ability to scale the system to medium-size buildings and to see multiple buildings under the same account. Bob Pruden, Vice-President of Service for Polk Mechanical in Dallas, Texas stated, “This really fills a gap in the light commercial monitoring and controls market. Our multi-site and medium site customers will be able to reduce their energy consumption with an easy to use and cost-effective solution.”

In addition to TVR and Polk Mechanical, PowerMand is also announcing new distribution agreements with the following firms: Comprehensive Energy Services and Hill York serving the state of Florida, Tri-Pacific Heating and Air Conditioning and Anderson Air Conditioning in southern California, and American Mechanical Services in Phoenix Arizona. Evergreen Refrigeration in Seattle, Washington, and Ameritech of Bothell, Washington have also been added to the growing list of authorized DreamWatts dealers.
